

Sandgrav

SOLUTIONS

Only the best is good enough

At Sandgrav Solutions, they're responsible for managing a wide range of confidential information on behalf of their clients. Some of this information is company-specific while other information is GDPR-related information such as social security numbers, sick leave information, etc. "If Sandgrav Solutions were victim to a successful cyber attack it would be catastrophic for us," states CEO Frederik Sangrav.

Customer:

Sandgrav Solutions

Industry:

Accounting &
Bookkeeping

The Challenge:

Responsible for managing sensitive customer data, Sandgrav Solutions needed a security solution that would allow them to start practicing better password hygiene across their organization and make the use of 2FA on all logins friction-free.

Before implementing Uniqkey:

- ✗ Employees practiced risky password habits, jeopardizing security.
- ✗ Company devices and services holding access to sensitive customer data lacked 2FA protection.
- ✗ Employees stored critical logins in unprotected word files.

After implementing Uniqkey:

- ✓ All logins are stored, encrypted and protected with military-grade security technology.
- ✓ Uniqkey's automatic 2FA feature lets Sandgrav Solutions use 2FA on all their services friction-free.
- ✓ Password Generator makes it easy to use strong passwords for services storing sensitive customer data.

”As a CEO, Uniqkey allows me to sleep peacefully because I know our logins are strong, and securely stored.”

- Frederik Sandgrav, CEO at Sandgrav Solutions

Having the highest level of security possible without complicating the workflow of their employees is a top priority at Sandgrav Solutions. Because of this, they decided to deploy 2 Factor Authentication on various logins. In particular, they wanted to improve the security of their login flow when accessing laptops and encrypting hard drives.

This is incredibly valuable for both their clients and employees, as all the information handled by Sandgrav Solutions is of a sensitive financial nature.

”What we needed was a simple way to use strong passwords for the many client-specific solutions we need access to as part of our work.” says Frederik Sandgrav. ”Despite the risks associated with it, it’s no secret that we often stored our passwords in a shared word-file or notepad.”

Frictionless onboarding & people-first design

For Sandgrav Solutions, implementing Uniqkey has been an easy, frictionless and intuitive process for everyone involved.

”Of all the software we use, this has been one of the easiest products to implement. It’s surprisingly simple for our employees to start using.” says Frederik Sandgrav.

Knowing user convenience is essential for the successful implementation of any new tool, Frederik Sandgrav was delighted when the onboarding process went swift and smooth.

”As a CEO, implementing new tools tends to be stressful and time-intensive, yet this wasn’t the case with Uniqkey. Their support team guided us from start to finish, resulting in a frictionless onboarding process.”

Using Uniqkey’s detailed Admin Dashboard which gives Sandgrav Solutions complete control and overview of all services and user accesses, administrators at Sandgrav Solutions are now able to onboard and off employees in just a few simple steps.

”This is an extremely useful feature, adds Frederik Sangrav, ”But the built-in Password Generator is the feature I’m most excited about. It makes it easy for all my employees to choose – and start using – complex passwords without worrying about remembering them.”
